Hi Jeremy,

It was a pleasure speaking with you and learning more about your background.

As discussed, we'd love to move you forward to the technical assessment stage for our **Staff Engineer** role. I've attached the challenge brief.

This is a design, architecture, and prototyping exercise. We're interested in how you approach owning a complex problem end-to-end, how you make architectural and security decisions under ambiguity, and how you communicate trade-offs to different stakeholders.

What we're looking for

We'll mainly evaluate submissions on:

- the depth and pragmatism of your sandbox architecture and system design
- the quality of your working proof of concept
- your thinking around safety, privacy, isolation, and failure modes
- how clearly you explain trade-offs, risks, and what you would defer
- the strength of your architectural reasoning in the ADR
- how effectively you communicate your decisions and leadership thinking in the video walkthrough

What to submit

Please include:

- your working POC (repo or zipped project via a link is fine)
- a README with setup instructions
- an Architecture Decision Record covering your design decisions, trade-offs, alternatives considered, and what you are deliberately deferring
- a short Loom video walking us through:
 - your overall approach and priorities
 - your leadership pitch for the feature and why your proposed approach is the right one
 - the key architectural and security decisions you made
 - the trade-offs and shortcuts you chose in order to ship a strong beta-quality prototype
 - the three technical deep-dive questions outlined in the brief, referencing your actual POC and your past experience
- what you would improve or add in a next iteration to take this toward production

We care less about polish and more about the quality of your thinking, technical judgement, and execution. A clear, well-scoped solution with strong reasoning is more valuable than something overbuilt.

We typically expect this to be completed within a few days, and around 7 days is standard. If you think you'll need longer than a week, please let us know.

Once you're ready, send your work back to me and we'll review it before the next discussion stage. You will receive feedback on your submission regardless of the outcome.

If anything in the brief is unclear, feel free to reach out.

Best,
Wib
